- Python, R, C, JavaScript
- HTML, CSS, Node.js, Flask
- Scikit-learn, Jupyter, NumPy, Pandas
- Git, Netlify, GitHub, Postman, MongoDB
- Critical Thinking
- Teamwork, Communication, Analytical Thinking, Creativit

LANGUAGE

English

Telugu - Native

Hindi

ABOUT ME

-I'm a student developer and creative technologist who loves building quirky, meaningful, and sometimes delightfully chaotic web projects.

-From real-time win probability apps to emotion-driven journaling tools and educational RPGs, I'm always blending logic with storytelling.

-My work leans into playful UI, interactive features, and experiences that make people think or smile.

-I enjoy working with static sites, animation, and designing interfaces that feel intuitive and alive.

-I'm especially drawn to ideas that mix creativity with code — the stranger, the better.

-At the end of the day, I build things that I'd want to use, explore, or get lost inside.

PROJECTS

Gibberish Oracle - GitHub

- A whimsical app that generates poetic nonsense using keyboard inputs.
- Stack: HTML, JS, Netlify

SafeWatch

- Web Application where user can drag and drop videos or link Youtube Videos for scanning for violence or Vulgarity
- Machine Learning Model and Large Learning Model

Weather WebApp - GitHub

- Live web application that displays weather conditions with an input of place

Reward Recommendation System - Codenheimer - Git

- A Python-based application designed to provide personalized reward recommendations.
- Utilizing the synthetic_user_dataset_10000.xlsx dataset, the system employs TF-IDF vectorization, cosine similarity, and natural language processing (NLP) to match users with rewards such as zoo tickets, concert passes, or gardening kits. A Flask-based web interface enhances user interaction, allowing users to select interests and receive tailored recommendations through a responsive frontend.

SheNotes

- SheNotes is a web-based application designed to allow users to create, manage, and organize notes securely while providing a hidden health tracker for menstrual cycle tracking. The application will support functionalities such as user registration, note management, health tracking, and reminders.
- · Database: MySQL and MongoDB
